Number of Files:	616 Wave files
Channels:	2 (stereo interleaved)
Bit Rate:	24 Bit
Sample Rate:	96 KHz
Metadatas:	Soundminer / iXML / XMP / BWAV / ID3

Thank you for your purchase,

'DICE SFX Party' is a unique and extensive sound library of 616 dice samples meticulously recorded and selected through a wide range of actions and interactions on various surfaces, with different dice types and quantities.

Technically speaking, the files are 24bits/96KHz stereo mix-downs of MS decoded setup along with contact-mic tracking.

They are carefully sorted through detailed file names and metadata.

As they embody some peculiar sonic qualities, they can be used in any creative ways, or be integrated 'as is' into any games or projects.

As with every sound library from Articulated Sounds, the files are embedded with **metadata** (Soundminer/iXML/XMP/BWAV/ID3).

I wish you all my best vibes!

Stephane Fuja Dufour
